

bootstrap

*Means to bootstrap components when a
Module is bootstrapped.*

app.module.ts x

```
1  import { BrowserModule } from '@angular/platform-browser';
2  import { NgModule } from '@angular/core';
3
4  import { AppComponent } from './app.component';
5  import { CoreModule } from './core/core.module';
6  import { SharedModule } from './shared/shared.module';
7  import { AppRoutingModule } from './app-routing/app-routing.module';
8
9  @NgModule({
10   declarations: [ AppComponent ],
11   imports: [ BrowserModule, CoreModule, SharedModule, AppRoutingModule ],
12   exports: [],
13   entryComponents: [],
14   providers: [],
15   bootstrap: [AppComponent]
16 })
17 export class AppModule { }
```

bootstrap

- `bootstrap` accepts a set of components you want Angular to bootstrap when the `Angular Module` is bootstrapped.
- Generally only present in the `RootModule` of an Angular App.
- Read more about the `bootstrap` array [here](#).

entryComponents
